C A R E E R O B J E C T I V E S

Architecture has taught me to see the whole and the detail at the same time. After fifteen years of practice, through collaborations with smaller and larger teams, across projects of different typologies and scales, that is perhaps the most important thing I carry with me.

I have found myself most fully in the design of residential spaces. Architects are asked to find, within an inadequate space, solutions that meet the real needs of real people — these "puzzles" bring out the most creativity and innovative thinking in my work.

I am currently working on urban planning projects. Further in my career, I would like to bring these experiences together through social housing projects, accessible residential units designed according to the principles of bioclimatic architecture, well connected to the city and conceived for long-term sustainability.

W O R K E X P E R I E N C E
